DYUHANDMADE DIGITAL STOREFRONT

Provisional Project Handover Report

Pre-launch technical handover and acceptance review

Website, customer accounts, Shopify content, security and operational readiness

Prepared for the DYUhandmade project owner and deployment team. This report records delivered work and supporting evidence, while keeping unfinished business and launch requirements explicit.

STATUS: TECHNICAL HANDOVER PREPARED

Final acceptance and public launch remain pending.

Evidence: E01, E04. Cover image is a storefront screenshot with illustrative hero artwork | See evidence index.

01 / DELIVERY SUMMARY

Where the project stands

A functioning custom storefront and account foundation, with traceable checks and clearly identified launch gates.

161
Shopify content entries
Expected editor entries found

27
Published products
27 variants; 154 media images

308
Responsive layouts
77 routes across four widths

Workstream	Current status
Storefront & content	Implemented and locally verified. Public pages, catalogue, editorial content, responsive layouts and 3D/product galleries are present.
Customer accounts	Live Shopify login and account reads verified. Wishlist persistence tested live; profile/address edits and populated order UI tested with fixtures.
Shopify administration	Branding, contact policy and catalogue presentation updated using existing assets and facts.
Backend & quality	Security/input fixes, production build, Node 24 compatibility checks and documented CI/deployment preparation completed.
Public commerce	Not launch-ready. Paused Shopify selling plan, business approvals, permanent hosting and a completed no-charge order test remain open.

How to read this report

Verified means supported by a saved audit or receipt in the stated environment. Prepared means files or configuration guidance exist. Pending means a decision or live validation is still required. No overall completion percentage is assigned.

Navigation: experience 4-7 | Shopify editing 8-9 | verification 10-12 | operations and acceptance 13-16

Evidence: E01-E06, E09-E11 | See evidence index.

02 / ARCHITECTURE

How the system fits together

Shopify is the system of record. The custom Next.js application provides the storefront and server API layer.

Data or capability	Authoritative location / boundary
Products and orders	Shopify owns catalogue, variants, stock, customer records, addresses and order data.
Website copy and imagery	Shopify website-content metaobjects plus native product, collection and policy records.
Signed-in wishlist	Customer metafield dyu.wishlist. Guest product handles merge after login.
Recent browsing history	Browser-local storage only; it does not synchronise across devices.
Authentication	Server-validated Shopify OAuth. Encrypted HttpOnly cookies; tokens are not exposed to client JavaScript.
Payments	Shopify-hosted checkout and the merchant payment provider. The app does not receive card details.
Application database	No separate database is provisioned. Initial deployment supports one persistent Node process.

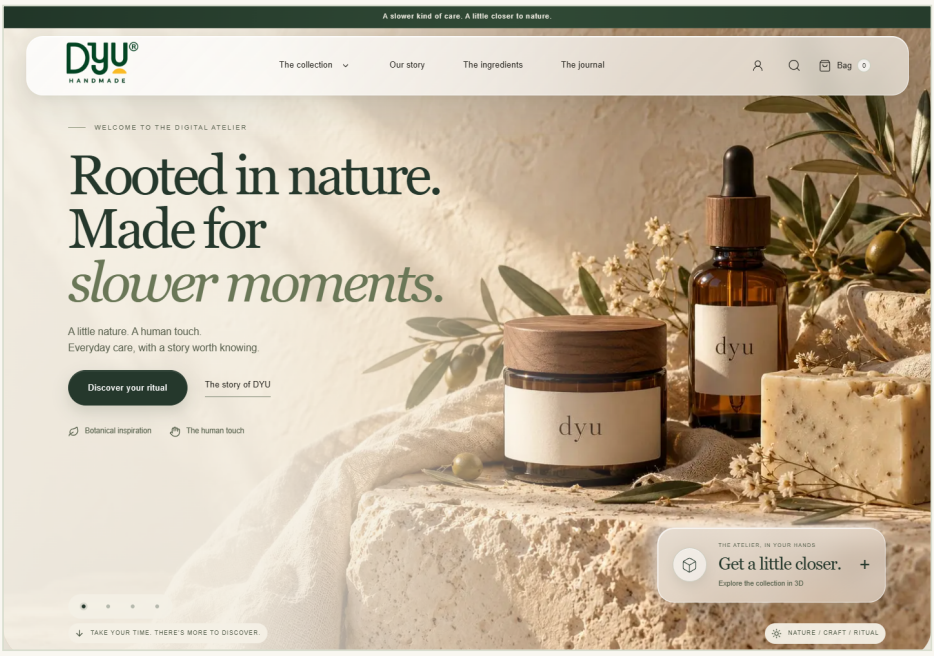

Stack snapshot: Next.js 16.3.8, React 19.3.0, TypeScript 7.0.2, Three.js 0.186.0 and Playwright 1.63.0. These are the installed project versions, not a claim that they are the latest releases.

Evidence: E01, E03, E12, E14 | See evidence index.

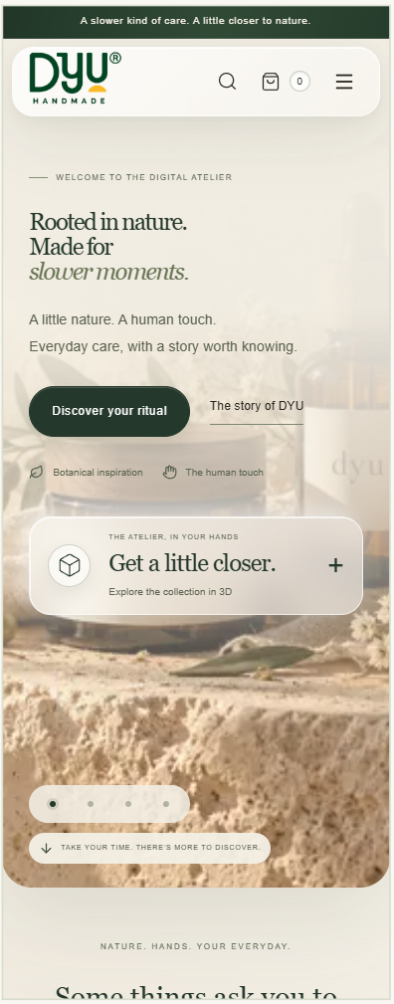

03 / EXPERIENCE DELIVERY

The storefront experience

The desktop and mobile experience share the same catalogue, brand language and shopping actions.

Desktop homepage: four-slide hero, navigation and 3D invitation. [S01]

390px mobile view. [S02]

Delivered interactions

- Four editable hero slots with pause and slide controls; reduced motion stops autoplay.
- Responsive navigation, search, product filtering/sorting and quick-add controls.
- Product availability and prices come from Shopify; sold-out states remain visible.

Responsive evidence

The crawl checked 320, 390, 768 and 1440px widths. No horizontal overflow or broken rendered images was found across the 308 audited layouts. These checks do not certify physical devices or all browsers.

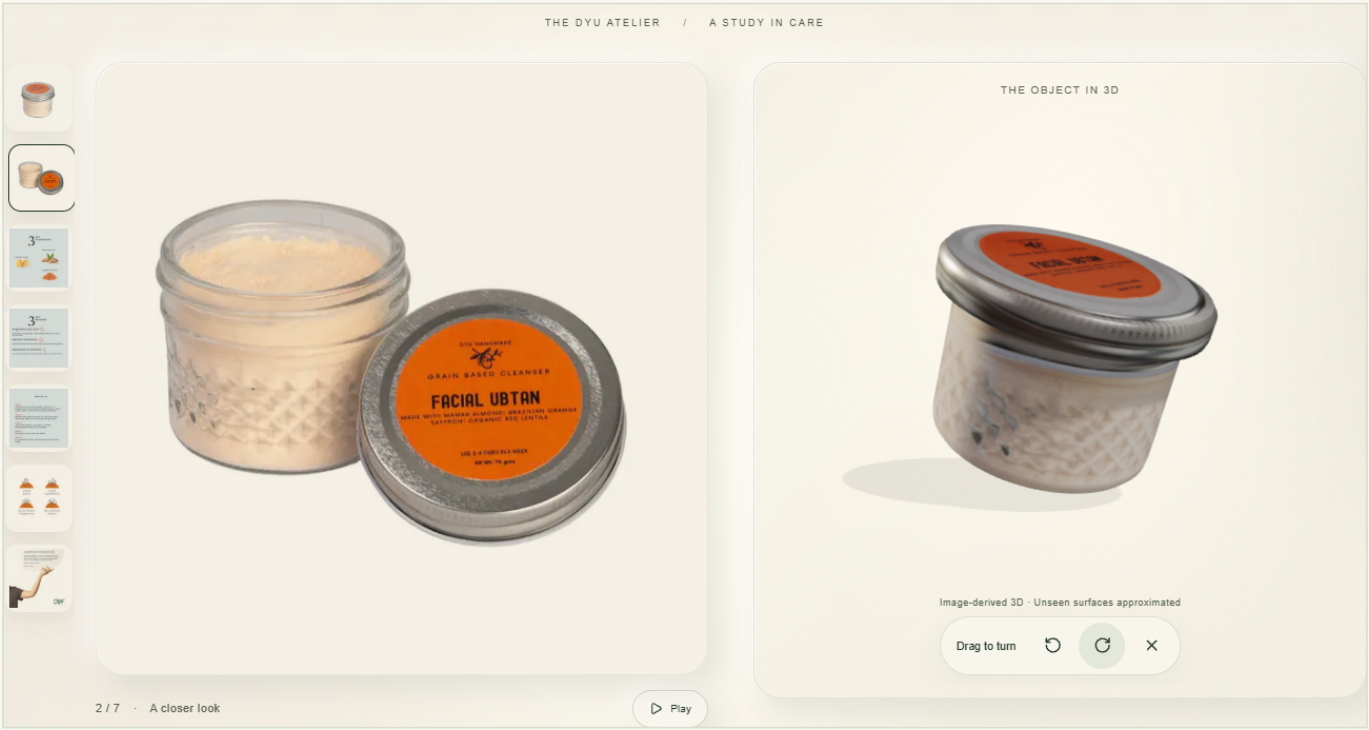

Product discovery also includes category heroes, featured collections, ingredient exploration, story/making pages, FAQs and the journal. Header, footer and selected navigation copy are exposed through Shopify content entries.

Evidence: E02, E04, E09; screenshot snapshots from the local audit | See evidence index.

04 / PRODUCT PRESENTATION

Product imagery and 3D

Native product photographs remain the source for gallery content and image-derived previews.

Photo/3D split-view screenshot. The approximation disclosure is part of the product experience. [S03]

Delivered	Behavior and practical limits
Product gallery	Native photographs, thumbnails, image navigation and a 3D viewing option. Shopify media order is preserved.
Image-derived models	Soap, bottle and container forms use the product imagery. Sides and depth are inferred; previews are not manufacturing-accurate scans.
Performance and access	Three.js loads on demand where supported. Demand rendering and reduced-motion behavior limit unnecessary animation.
Purchase controls	Single-option products no longer show Shopify's internal Default Title. Pending and sold-out actions are guarded.
Description formatting	Shopify paragraphs, line breaks and lists remain readable as escaped display text. Merchant copy and plain SEO/search descriptions are preserved.

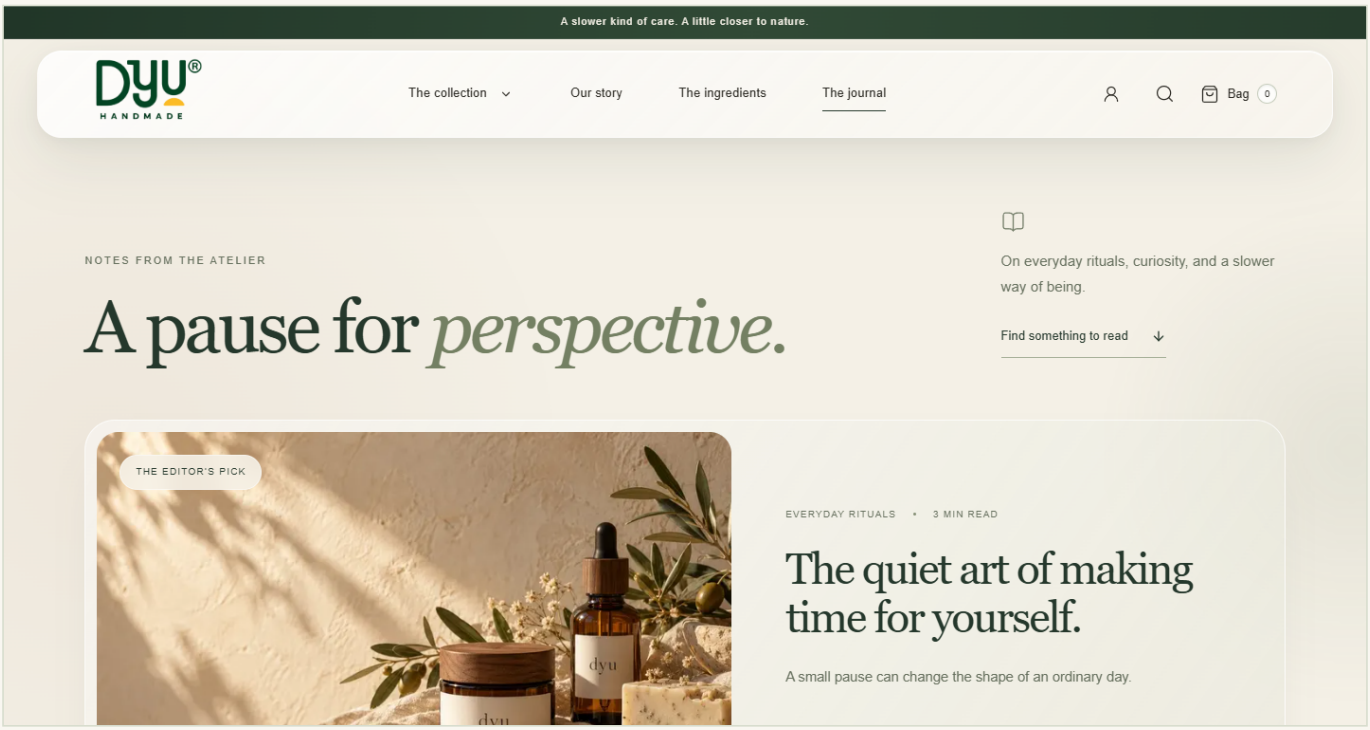

Preserved: product IDs, handles, prices, inventory, image URLs and ordering. Existing benefit and suitability claims were retained, not independently substantiated.

Evidence: E01-E04, E08, E10, E14 | See evidence index.

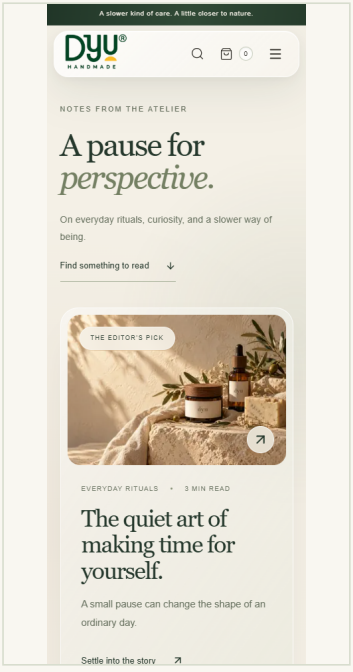

05 / CONTENT PRESENTATION

Editorial content and typography

Unintended line breaks and punctuation were corrected while preserving deliberate editorial styling.

Wide journal viewport excerpt: "A pause for perspective." fits one line when the layout has room. [S04]

Responsive mobile wrapping. [S05]

What changed

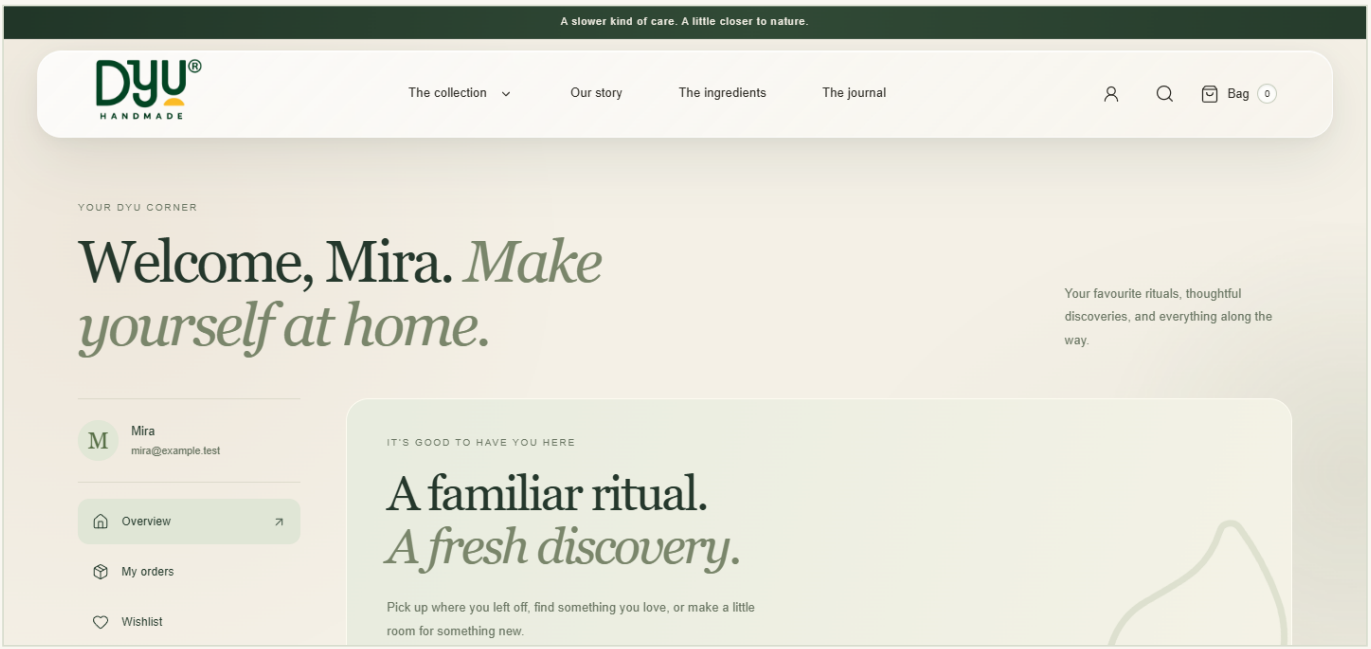

- The forced break was removed; inline italic emphasis remains. Narrow layouts wrap naturally.
- Journal categories, search, articles and onward-reading panels are implemented.
- Product punctuation and separator spacing were corrected where the intent was unambiguous.
- Branded spellings such as Lavendar and Trip were preserved for merchant review.

Evidence: E02, E04, E08; journal and typography audit screenshots | See evidence index.

06 / ACCOUNT DELIVERY

Customer accounts

Passwordless Shopify login connects a personal account area with saved products and order access.

Representative authenticated UI using test fixtures (Mira / example.test). No real customer or completed order is shown. [S06]

Feature	Delivered behavior	Evidence level
Sign in / sign out	Shopify email-code login; secure callback/session and logout handling.	Live login verified
Overview and orders	Account overview, order list, pagination and order details.	Live empty read; populated fixtures
Profile and addresses	Name/address management; email and phone updates remain in Shopify's hosted portal.	Live reads; writes mocked
Wishlist	Guest persistence, merge after login, signed-in add/remove and persistence.	Live round trip verified
Recently viewed	Local browsing history with clear controls.	Automated coverage
Session expiry	Private UI clears on expiry/sign-out; cross-tab logout clears saved account state.	Automated coverage

The live test account had no previous orders. Order lifecycle, refunds, live profile/address changes, live token refresh and two-customer isolation still need final acceptance checks.

Evidence: E01-E03, E05-E07; fixture screenshot source S06 | See evidence index.

07 / MERCHANT GUIDE

Editing the website in Shopify

Content → Metaobjects → DYU • Website content is the main editor for this custom storefront. Keep entry handles stable.

home-hero

Image + optional copy / mobile art

Hero slide 2

Image + optional copy / mobile art

Hero slide 3

Image + optional copy / mobile art

Hero slide 4

Image + optional copy / mobile art

Website area	Where to edit	What the control changes
Hero banner	home-hero + home-hero-slide-2/3/4	Images, alt text, crop, order, visibility and supported text/buttons. Blank text on slides 2-4 inherits from slide 1.
Autoplay / sections	home-hero; home-layout; section enabled	Autoplay, 2-20 second timing, supported section order and visibility.
Category / collection hero	shop-hero[-category]; native Collections; collection-[handle]	Uploaded artwork, selected product, image/3D mode, collection title and introduction.
Product pages	Products + dyu metafields; product-* entries	Media, prices, variants, native descriptions, ingredients, usage/care and shared panel text.
Editorial / support	story-*, craft-*, ritual*, journal-*, article-*, faq-*	Story, making, rituals, article bodies, imagery, categories, supported ordering and FAQs.
Header / footer / logo	announcement, brand, nav-*, header-*, footer*, site-seo	Selected site navigation, logo, sharing defaults and common content.
Store policies	Settings → Policies	Native policy records take precedence over section fallback text.

Limits that matter

The four hero slots are wired explicitly; a fifth needs development. Typography, colours, 3D geometry, secure account messages and layout remain code-managed. Shopify Theme Customizer controls a separate theme. Native Brand colours do not recolour this custom Next.js site.

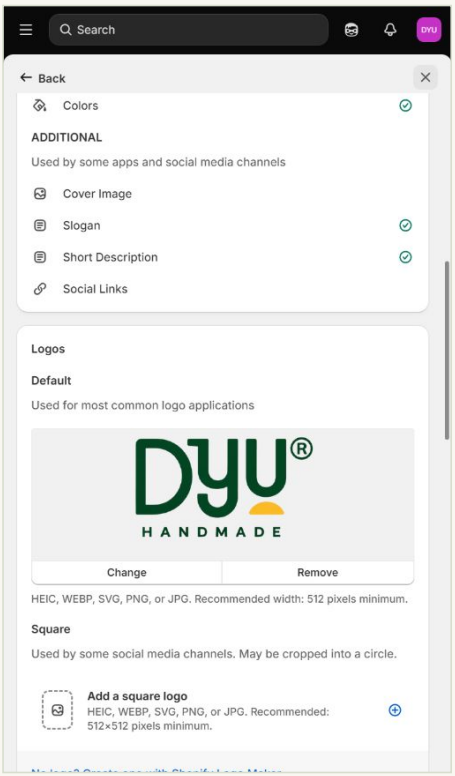

Save, then check the preview after roughly two minutes and subsequent requests. A signed cache webhook can refresh sooner when configured; none was registered in this audit. Blank fields inherit defaults; use supported visibility switches to hide content.

Evidence: E04, E09, E14. Full field map remains in README.md | See evidence index.

08 / LIVE ADMINISTRATION

Shopify changes completed

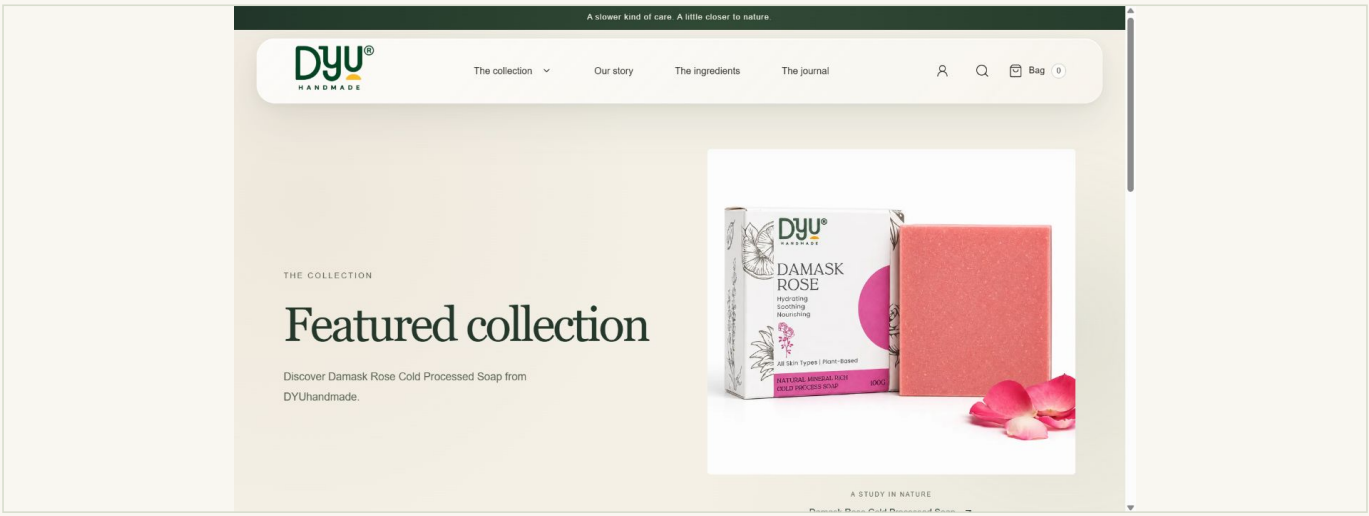

Changes used the existing brand assets and established store facts. Billing, stock, tax and payment settings were preserved.

Saved native brand settings. [S07]

Saved and verified

- Store display name: My Store → DYUhandmade. Legal entity details were preserved.
- Default logo, forest/cream palette, existing slogan and short description added to Shopify Brand settings.
- The website brand content entry now references the same uploaded logo, so the site image is Shopify-editable.
- Contact information policy published from existing public details. Automated privacy policy preserved.

Featured collection: customer-facing title, factual introduction and the existing Damask Rose product photograph. [S08]

The collection URL, membership, publications and sorting were retained. This is a presentation update, not a change to the catalogue structure.

Evidence: E08, E11; native Brand and website-content controls are separate | See evidence index.

09 / CATALOGUE AUDIT

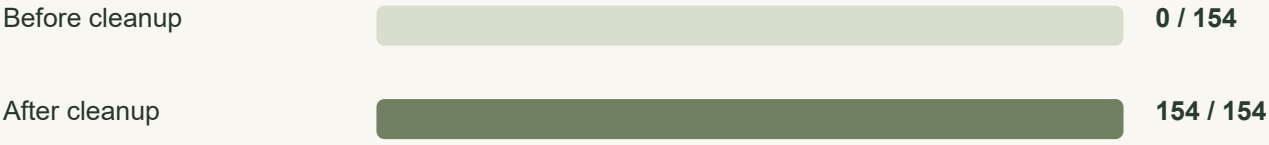

Catalogue quality and cleanup

The audit separated safe copy cleanup from product facts that require merchant approval.

154 / 154
Product images now have alt text
Labels identify product and gallery position

26 / 27
Native product descriptions
Moringa Facial Oil remains incomplete

Native product-image alt labels

Verified cleanup	Count / preserved boundary
Native title spacing	4 fields corrected across the cleanup set.
Native description punctuation	3 fields corrected; 6 products affected by title/description cleanup.
Related short stories	2 fields corrected to match established native wording.
Product imagery	154 previously empty native alt fields filled. These are identity labels, not individually authored scene descriptions.
Catalogue references	Product handles, prices, inventory, image sequence and native product image URLs preserved.
Content editor inventory	161 expected website-content entries found, with no unresolved image references at verification.

Merchant content still required

Moringa lacks a native description and short story. Complete approved ingredients, directions, care and claims are still needed. Possible duplicate Ubtan listings and deliberate product naming remain unchanged. Only 1 of 27 variants was available via Storefront; this does not establish the stock quantity or reason for unavailability.

Evidence: E04, E08, E09. Initial audit counts are historical; follow-up receipts take precedence | See evidence index.

10 / QUALITY ASSURANCE

Verification and test evidence

Results are grouped by environment. Overlapping suites are not added into a single pass total.

320px
77 route layouts

390px
77 route layouts

768px
77 route layouts

1440px
77 route layouts

308 layouts: 0 horizontal-overflow findings, broken rendered images, broken internal navigation or runtime errors in the stable-source crawl. Five missing-route recovery cases were also checked.

Evidence group	Result	Environment / limit
Core suite	86 / 86 passed	Windows, bundled Node 24.19.0. Offline fixtures; no Shopify access.
Account/API subset	9 / 9 passed	Windows Node 25.2.1; existing local server. Account writes mocked.
Health-probe tests	5 / 5 passed	Node 24.19.0. Local probe logic, not hosted monitoring.
Final built-preview regression	4 / 4 passed	Two pointer + two description-layout checks; cart requests mocked.
Anonymous preview inspection	12 check records passed	Real built app: private paths, anonymous account-access protection, health and preview indexing.
Metadata follow-up	24 / 24 passed	Description/status/preview-robots/canonical rechecks after the initial crawl.
Build / TypeScript	Passed	Local production build; Node 24 follow-up typecheck. No hosted Linux build verified.

Residual observation and coverage limits

One development run saw a Next router-initialization error. Repeated focused and production checks passed, but its original caller is unresolved; stack capture remains. The broad suite needed focused repairs/rechecks, not one uninterrupted green run. Physical devices, Safari/Firefox and formal assistive-technology certification remain unverified.

Evidence: E02, E05, E06, E10. Tests are evidence of the stated checks, not a security or accessibility certification | See evidence index.

11 / SECURITY REVIEW

Backend and data safeguards

Implemented controls protect API inputs, customer sessions, private responses and Shopify integration boundaries.

Origin
Reject cross-site mutations

Input
Bounded bodies and valid IDs

Session
Shopify customer ownership

Response
Private/no-store and safe errors

Area	Implemented and reviewed behavior
Login and session	PKCE, state, nonce and signed-token validation. Encrypted HttpOnly cookies; Secure and __Host- on HTTPS. Server-side token refresh.
Request validation	Streaming input reader rejects oversized/chunked or malformed bodies. Cart/account JSON capped at 20,000 bytes; webhooks at 4 MiB.
Account ownership	Customer token scopes account access. Callers cannot supply arbitrary customer ownership IDs for profile, addresses or wishlist.
Cart / checkout	Allowed actions, IDs and quantities validated. Fresh checkout URL requested after buyer identity is rebound or cleared for a guest.
Wishlist consistency	Malformed/over-capacity stored lists are rejected before write; compare-digest retries protect concurrent updates.
Cache webhook	HMAC checked against bounded exact raw bytes. Cache invalidation cannot create orders or settle payments.
Readiness and diagnostics	Health returns 503 when catalogue readiness fails. Errors are bounded/redacted; authentication tokens are never exposed to client JavaScript.

Scope of this assurance

The scoped review left no confirmed P0/P1 issue, but it is not a penetration-test certificate. Source/bundle checks and anonymous endpoint tests do not replace live two-customer isolation, refresh, host/proxy or payment acceptance. Horizontal scaling requires shared refresh coordination or a revised session design.

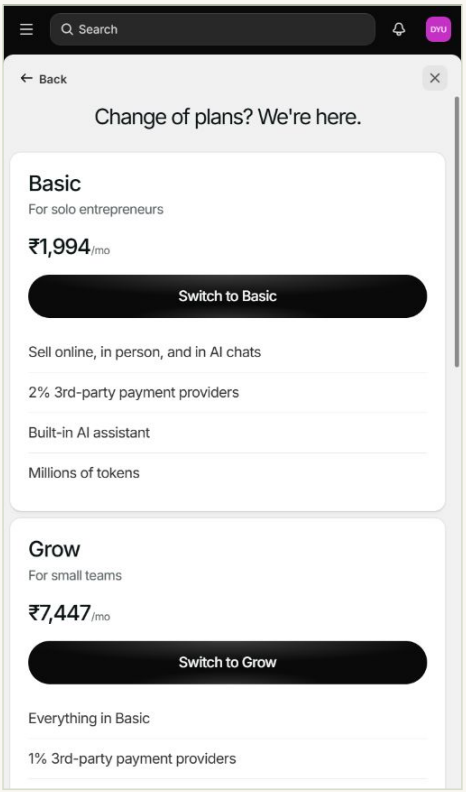

Evidence: E03, E05, E06, E10, E12 | See evidence index.

12 / COMMERCE READINESS

Checkout: verified up to handoff

A real Shopify cart was exercised without submitting an order or entering payment details.

1 Add item	2 Quantity 2	3 Checkout	4 Order
INR 449	INR 898	Handoff reached	Blocked by plan

Observed plan selector; no plan purchased. [S09]

Store configuration

- Current plan: Pause and Build, INR 680/month. Checkout displayed that the store is not set up to receive orders.
- Basic was offered at INR 1,994/month. No free selling option was shown. Final bill, tax or proration was not verified.
- India Standard shipping: free. International Standard: INR 1,700 for a 28-country zone, subject to market activation.
- India Manual Tax is configured; prices exclude tax. Registration, classification and destination totals still need merchant verification.

Test state restored

The test bag was emptied and the test wishlist restored. No order, charge, settlement, refund or fulfillment was completed. A working account screen and checkout handoff are not proof of a completed purchase.

Razorpay was explicitly excluded from follow-up work. No provider installation, activation or payment configuration was performed. Final payment acceptance belongs to the merchant-approved test process after checkout is enabled.

Evidence: E01, E07, E10, E11. Shipping/tax entries are observed settings, not a compliance assessment | See evidence index.

13 / DEVELOPER HANDOVER

Deployment and operations

Deployment preparation is delivered. The current HTTPS preview is temporary and runs from the workstation.

Prepared asset	Use during deployment
docs/deployment.md	Host selection, environment injection, single-process setup, cutover, verification and rollback.
deploy/dyu.service	Optional Linux service template with restart/shutdown behavior; not installed.
deploy/nginx.conf.template	Optional trusted HTTPS proxy, body/rate controls and restricted logging; not deployed or target-validated.
deploy/healthcheck.mjs	Bounded anonymous readiness probe. Five logic tests pass; no recurring monitor was created.
.env.example	Variable names and purposes. Actual secrets must be transferred through secure storage.
.github/workflows/check.yml	Node 24/Ubuntu CI prepared. Hosted execution and clean Linux build remain unverified.

Release sequence

- 1. Choose a persistent Node host and a stable HTTPS origin; a provider hostname can avoid purchasing a custom domain.
- 2. Deploy one Node process. Inject secrets privately; use the same permanent origin for storefront and customer accounts.
- 3. Register matching Shopify callback, logout and JavaScript origin URLs. Build and validate on the actual target host.
- 4. Repeat login, account, wishlist, cart, no-charge purchase and proxy checks. Keep indexing off during acceptance.
- 5. After merchant acceptance, enable indexing, rebuild, verify canonical/robots/sitemap and agree monitoring ownership.

Operational ownership

Keep backups of approved content and the last working build. Roll back app releases independently of inventory/orders. Transfer secrets separately; exclude local environment files, customer data and workstation logs from the handover archive. Retest after domain, OAuth, gateway or deployment changes.

Evidence: E01, E05, E12, E14 | See evidence index.

14 / OUTSTANDING ACTION REGISTER

Open items before final acceptance

These items require merchant facts, a deployment target or live acceptance. No deadlines have been assumed.

Priority / owner	Outstanding action	Closure evidence
Launch gate Merchant	Review billing and enable an appropriate Shopify selling plan.	Checkout accepts a test flow; owner confirms the selected billing terms.
Launch gate Merchant	Confirm actual stock, missing product facts and approved product claims. Resolve naming/duplicate-listing decisions.	Approved catalogue, ingredients, usage/care and correct availability.
Launch gate Merchant	Approve shipping destinations/rates, tax setup, legal identity and shipping/refund/terms policies.	Saved approved settings and policies; destination totals checked.
Launch gate Deployer	Select permanent hosting, secure secrets, configure the stable origin, proxy and OAuth URLs.	Target build, health, login/logout, caching and private-path checks pass.
Launch gate Merchant + QA	Complete an explicitly no-charge order test with a verified test payment method. Razorpay work remains excluded.	Order appears in Shopify and account history; totals match; relevant failure/recovery paths pass.
Acceptance QA + deployer	Repeat device/browser/accessibility checks and the guarded carousel interaction on the final host.	No blocking defects; remaining observations documented and accepted.
Launch gate Owner + deployer	Approve final release and search indexing; confirm operations owner, backup and alert process.	Recorded acceptance and successful public-origin release checks.

What is not implied by this handover

This report does not grant launch approval, certify compliance or confirm payment readiness. The one-page remaining-steps PDF provides the short owner checklist; this report supplies the evidence and technical context.

Evidence: E01-E07, E11-E13 | See evidence index.

15 / HANDOVER PACKAGE

Acceptance record and evidence index

This issue is a provisional record. Final acceptance remains pending and is not signed or implied.

Review area	Record for final handover
Merchant approval	Product information, stock, policies, shipping/tax and intended trading configuration.
Technical acceptance	Permanent build, host/proxy controls, OAuth, account behavior and documented residual issues.
Commerce acceptance	No-charge order result, account order history and approved recovery checks.
Final release record	Approved origin, release revision, acceptance date and named operational owner - all pending.

Evidence index

E01 HANDOVER.md - consolidated status and boundaries
E02 docs/audit-frontend.md - routes, interactions and remaining coverage
E03 docs/audit-backend.md - fixes and security review limits
E04 docs/audit-content.md - content/editor audit; read follow-ups for current values
E05 qa/handover/ci-verification.json; docs/testing.md - environment-specific tests
E06 qa/accounts/shopify-setup.json - actual login and wishlist verification
E07 qa/handover/shopify-audit.json - live cart/checkout; historical name snapshot
E08 shopify/handover-cleanup/ - mutations, backups, rollback and Storefront reads
E09 qa/content/ - catalogue and 161-entry editor verification
E10 qa/handover/verification.json; preview-verification.json - build and checks
E11 qa/handover/admin-followup.json - current brand, policies and plan observations
E12 docs/deployment.md; deploy/ - deployment preparation and limits
E13 output/pdf/DYU-remaining-steps.pdf - concise owner action list
E14 README.md; package.json - editing instructions, architecture and versions

Paths are relative to the handover repository. Source receipts contain the detailed audit history. Test groups overlap; no combined pass percentage is asserted. Prices are the values displayed during the dated audit.

Evidence: Prepared from saved project evidence; credentials and live customer records are omitted | See evidence index.

APPENDIX / VISUAL EVIDENCE

Screenshot register and next use

Screenshots are dated audit snapshots of the implemented project. They are not evidence of a permanent public launch.

ID / view	Repository image path	Interpretation
S01 Desktop homepage	qa/frontend-handover/home-1440-top.png	Public UI; hero artwork is illustrative.
S02 Mobile homepage	qa/frontend-handover/home-390-top.png	390px viewport; browser emulation.
S03 Product photo / 3D	qa/product-gallery-split-desktop.png	Image-derived approximation, not a product scan.
S04 Wide journal heading	qa/handover/final-journal.png	Verified inline headline and italic emphasis.
S05 Mobile journal	qa/frontend-handover/journal-390-top.png	Responsive wrapping at narrower width.
S06 Account overview	qa/account-ui/overview-1440.png	Synthetic fixture identity, not a live customer record.
S07 Native brand settings	qa/handover/shopify-brand-settings.jpg	Saved Shopify administration changes.
S08 Featured collection	qa/handover/featured-collection.jpg	Real catalogue photograph and latest Shopify logo.
S09 Selling-plan options	qa/handover/plan-options.jpg	Read-only billing evidence; no selection purchased.

Using the package

- Merchant: start with the one-page checklist, then use page 8 and README.md for day-to-day editing.
- Developer: start with HANDOVER.md, the deployment runbook and the environment/test boundaries on pages 10-14.
- Final handover: attach the completed acceptance evidence and a release revision once the launch gates close.

Evidence: S01-S09 retain their source pixels; pages 6-7 show labelled viewport excerpts | See evidence index.
