What remains before launch

The technical handover is prepared. The store still needs the following decisions and checks before it can take orders.

1. ## Enable a selling plan

   The current Pause and Build plan (INR 680/month) disables checkout. Shopify showed Basic at INR 1,994/month and no free selling option. The owner must review and accept the billing change.

2. ## Confirm stock and product details

   Enter real stock quantities. Supply missing product descriptions, complete ingredients, directions and care information, especially for Moringa Facial Oil.

3. ## Confirm store rules

   Approve delivery areas, shipping rates and tax settings. Provide shipping, returns/refund and terms policies, and confirm the legal business details.

4. ## Choose permanent hosting

   Choose a hosting account and stable HTTPS address; a suitable provider address can avoid buying a domain. Deploy the site, update Shopify login URLs and validate the host setup.

5. ## Run the final no-charge order test

   Once checkout and a test payment method are ready, verify checkout totals, the Shopify order record and account history. Repeat phone/desktop checks on the final host before enabling search indexing.

Razorpay was excluded as requested. No paid plan change, payment or order was made.
